

E 3000-07 Offshore pump unit for cleaning/surface prep. applications - electrically powered for Zone 1 -

Minimum space Maximum performance

The E 3000-07 in "offshore design" with a space requirement of only ca. 1.6 sq.metres (2.4 cu. metres), is an extremely compact high pressure pump unit and thus provides ideal prerequisites for the use of high pressure water where space is restricted.

A further advantage for offshore applications: at only 1400 kg this unit has an extremely high power to weight ratio.

Performance data

Flow rate	8,5 l/min
Op. pressure	2000 bar
Power rating	34 kW
Connection	to 63 A plug

Alternative performances and motor ratings up to 70 kW are possible.

- Central lifting point
- Storage facility for water jetting accessories and power cable

Ex-proof Zone 1 control cabinet

Power selector

Units are designed, constructed, tested and certified to following specifications:

- ATEX 94/9/EC
- EN S 00 14
- NORSOK Standard Z-015 Temporary Equipment

Offshore blasting equipment for cleaning/surface prep. applications

Applications

- Rust removal, Paint stripping
- Surface preparation to NACE/SSPC standard "WJ1/SC2"
- Weld preparation
- Water entrained abrasive cutting
- Marine growth (submerged) removal

General applications

- Pipework cleaning
- Heat exchanger cleaning

Ultra high pressure blasting guns with a variety of barrel lengths combined with rotorjets for rust removal and surface preparation even where access is difficult.

Marine growths and coating material can be removed from sub sea weld seams bolted connections etc. by the Hammelmann underwater blasting gun to enable maintenance inspection.

The AQUABLAST®PLUS will strip horizontal surfaces such as helipads while vacuuming waste and waste water away leaving the surface dry enough for immediate re-coating.

The hand AQUABLAST® is designed to strip large areas of vertical surfaces where only manual deployment is practical.

The water entrained abrasive cold cutting system can be applied to pipe work, tanks, bulkheads etc.
